pratapghad

*pratapghad literally valour
fort is a large
fort located in satara
district in the Western Indian
state of maharashtra
pratapghad is located
at 23 km west of
mahabaleshwar
a popular hill station in the area*

wai- Mahaganpat Lord temple

In this temple we reach at 3.00 pm

then we take dharshan of Lord. ganesh

History of this temple:-

Wai has the epithetic name "Dakshin Kashi" (Kashi or Varanasi of the South) because of the city's more than 100 temples. Wai is known in Maharashtra for its ghats on the banks of the Krishna River and its temples, especially the Dholya Ganapati temple on Ganapati Ghat.

The 17th century warlord Afzal Khan (general), representing Ali Adil Shah II of the Bijapur Sultanate, is said to have made his first halt here on his way to the fort of Maratha ruler Chhatrapati Shivaji Maharaj. A cache of 105 guns, swords and other weapons were found in Wai around 2005.

Mapro Garden

Mapro set up a fruit processing unit at Gureghar with 12 permanent employees and also involving remaining villagers into farming. Mapro provided the farmers technical guidance and also guaranteed to buy their produce. The region has the highest produce of strawberries in India and constant increase in tourist inflow over time. Tourist recognition led to the development of the **Mapro Garden** which is the popular identity of Gureghar among tourists now.

madhusagar honey center

**we reach at this center at 5.00 clock.
we see the product of honey forex jelly
chocolate awala condy in honey**

Honey has always been plentiful in the entire Mahabaleshwar area. The honey collectors would smoke away the bees from the combs, scrape out the wax cover and squeeze the honey out by hand. This was then filtered through a cloth to make it somewhat presentable. As can be imagined, there was a lack of hygiene in both the squeezing as well as the filtering. This was then sold direct to customers, or to shopkeepers in Mahabaleshwar, who poured the honey into whatever bottles they had, and sold it for as high a price as they could, depending on the type of customer.

This fort was known by the name of Asvalayana Rishi, since he lived here for many years in ancient times. Then it was called Aswalya gad due to the number of Aswals or bears wandering there. The fort was made by Bahamani Emperors in between (1347-1527). After that in (1527-1686) it came under Adilshah dynasty. Mughal king defeated Adilshah and the fort came under Mughal rule. This fort was captured by King Shivaji on 2 April 1663 from Adilshah. Previously known as Parali, it was renamed to Sajjangad. Fateullahakhan's army encircled the fort on 21 April 1700 and finally captured it on 6 June 1700. After it became the part of Mughal empire, it was renamed as "Navrastara". This fort was again won by Marathas. The fort was captured by British in 1818.

औद्योगिक क्षेत्रभेट अहवाल

गुरुवार दिनांक 12/11/2020 रोजी श्रीमती विजयादेवी देसाई सिनिअर कॉलेज दौलतनगर या महाविद्यालयातील वाणिज्य विभागामार्फत औद्योगिक क्षेत्रभेट ही लोकनेते बाळासाहेब देसाई सहकारी साखर कारखाना दौलतनगर ता. पाटण जि. सातारा या ठिकाणी नेण्यात आली. या क्षेत्रभेटीस बीकॉम भाग 3 चे सर्व विद्यार्थी, प्राध्यापक उपस्थित होते. लोकनेते बाळासाहेब देसाई सहकारी साखर कारखाना हा 14/10/1969 रोजी सुरु करण्यात आला. त्या कारखान्याचे ऊस गाळप 20/1/1972 पासून सुरु झाले. साखर निर्मिती तयार करण्यासाठी उस बिट संकल्प केला व त्यासाठी मोठ्या प्रमाणावर ती साखर कारखानदारी आणि भांडवलाची आवश्यकता असते त्यामुळे शेतामध्ये तयार करायचे त्याच्यावर प्रक्रियायुक्त पदार्थ तयार करून साखर निर्मिती होत असते. ऊस, बीट इ. च्या रसापासून प्रक्रिया युक्त पदार्थ तयार केले जातात त्यास ठिकाणी साखर तयार केली जाते त्याला साखर कारखाना असे म्हणतात.

ऊस हे पीक नाशवंत असल्यामुळे ऊस तोडल्यानंतर उसावर प्रक्रिया करण्यासाठी लगेच ते साखर कारखान्यात पोहचवावे लागते. उस या पिकावर साखर कारखान्यात प्रक्रिया करून साखर तयार केली जाते. साखर कारखान्यात तयार केलेली साखर अनेक खाद्यपदार्थ, ज्यूस व विविध प्रकारच्या पेयांमध्ये वापरली जाते. साखर उद्योग हा शेतीवर आधारित व्यवसाय आहे.

उसापासून रस काढला जातो उसावर योग्य ती प्रक्रिया केली जाते आणि त्यापासून पदार्थ तयार केला जातो. ऊस किंवा बिट याचा रस उकळून रसायन मिसळून त्यामध्ये मळी वेगळीच काढून पाक वेगळा केला जातो. आणि नंतर तो गाळून वाळवला जातो नंतर साखरेचे दाणे तयार होतात. साखर हा पदार्थ किती मूलद्रव्यांपासून बनलेला आहे. साखर तयार होत असताना त्यामध्ये आवश्यक ते घटक असतात मॅग्नेशियम, कॅल्शियम आणि फॉस्फोरस असे घटक त्यामध्ये असतात. साखर ही रंगाने पांढरी असते साखरेचे प्रकार हे जाड लहान ब्राऊन शुगर पांढरी शुगर अशी प्रकार मोडत असतात.

Introduction

Industrial visit is essential in syllabus. For B.Sc.III Chemistry students so we visited Loknete Balashaheb Desai Sugar Factory to acquire knowledge about industrial working.

Information provided in this visit report is valuable for all who want to understand the working of Sugar In

Extraction of sugar cane juice-

The cane is washed and remove mud and dirt then cut small pieces. The chips is send milling train and the chips are crusher, the juice are collected vibrating porous pan. it fileters cane juice and removes bing suspended matter.

The pans below 2nd 3rd 4th mills are not porous but simple containers. The raw juices is sent to boiling house.

Clarification of juice-

Clarification or defication is the process of removing the impurities from the cane juice.

The cane juice collected from mill house contains water (78-86%) ,Sucrose(10-20%) ,Organic matter (0.5-1%).the extracted cane juice is acidic and greenish liquid the ph freshly extracted juice (5.1-5.7) is increased to 7.5-8.5 by adding milk of lime.

The phosphate level of juice is raised (less than 3.0) by adding phosphoric acid it helps clarification. The lime juice is heated boiling (333K) in juice heater. The hot juice is send settling tanks. Hot limed juice is separated three layers. The clear juice drained out though the pipe.

Crystallization of Sugar –

To crystallize sugar water content of sugar syrup is reduced single effect vacuum pan. In vacuum pan the syrup is heated by steam under vacuum sucrose concentration is raised to super saturation (85% of sucrose at 353 K). The syrup cools down break super saturation

dustry from this report we can understand sugar making process, materials, chemicals used in the process of sugar making and also understand about varies in the sugar forming process. Here this report is very valuable.

The syrup gradually cools down to break super saturation. Super saturation is broken by sudden chilling either by decreasing steam flow or by increasing vacuum or by suddenly mixing large amount of cold syrup. The breakeven point is detected by observing a drop of syrup on glass plate under lamp light. Appearance of shiny, small crystals on the plate indicates the breakeven point.

In India, syrup is initially seeded with external seed grains. About one ton of fine gains are mixed with the syrup in the pan. This is sufficient for 25 to 30 tons of massecuite. This saves time and disposes of low grade sugar.

Centrifugation-

It is separation of sugar crystals from mother liquor. The centrifuge is a cylindrical perforated basket rotated by mounting on vertical shaft. It holds back sugar crystals but allows only liquid to pass through the pores. Keeping hot massecuite in the centrifuge it is spun at the speed of 1800- 2400 rpm.

Centrifugal force draws the massecuite to the wall of basket and force out the syrup through the perforations. Sugar crystals appear greyish brown colored due to coating of molasses film. So, water is sprayed to wash out adhered molasses. The basket is rotated till sugar is fairly dry to collect.

Epilogue

Special thanks to M.D to grantus permission to visit lokanete Balasaheb Desai co-operative sugar factory also special thanks to A.C. Officer who gives us all information about sugar factory also thanks to principal to give us permission to visit factory. information provided in this report is valuable to all hence it is important.

With reference to subject cited above our college library proposes Memorandum of Understanding for Inter-Library Loan with your college library. Industrial Visit Under

**Day-Monday
Date.-28-02-2022**

Guide – Prof. Shirke R. M. (Head of Department)

On 28th Feb 2022, Monday the industrial visit was arranged by Smt. Vijayadevi Desai Senior College, Daulatnagar. Department of Chemistry for the student of B.Sc.-III observed the Working of Sugar Factory

The Quality Control Officer in the Sugar Factory Provided the information about process of manufacturing of the sugar and their by products.

Introducation

Industrial visit is essential in syllabus. For B.Sc.III Chemistry students so we visited Loknete Balashaheb Desai Sugar Factory to acquire knowledge about industrial working.

Information provided in this visit report is valuable for all who want to understand the working of Sugar In

Extraction of sugar cane juice-

The cane is washed and remove mud and dirt then cut small pieces. The chips is send milling train and the chips are crusher, the juice are collected vibrating porous pan. it fileters cane juice and removes bing suspended matter.

The pans below 2nd 3rd 4th mills are not porous but simple containers. The raw juices is sent to boiling house.

Clarification of juice-

Clarification or defication is the process of removing the impurities from the cane juice.

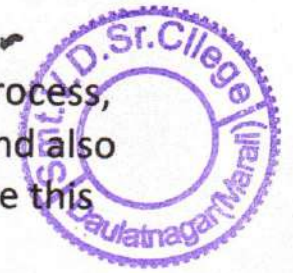

The cane juice collected from mill house contains water (78-86%) ,Sucrose(10-20%) ,Organic matter (0.5-1%).the extracted cane juice is acidic and greenish liquid the ph freshly extracted juice (5.1-5.7) is increased to 7.5-8.5 by adding milk of lime.

The phosphate level of juice is raised (less than 3.0) by adding phosphoric acid it helps clarification. The lime juice is heated boiling (333K) in juice heater. The hot juice is send settling tanks. Hot limed juice is separated three layers. The clear juice drained out though the pipe.

Crystallization of Sugar –

To crystallize sugar water content of sugar syrup is reduced single effect vacuum pan. In vacuum pan the syrup is heated by steam under vacuum sucrose concentration is raised to super saturation (85% of sucrose at 353 K). The syrup cools down break super saturation

dustry from this report we can understand sugar making process, materials, chemicals used in the process of sugar making and also understand about varies in the sugar forming process. Here this report is very valuable.

The syrup gradually cools down to break super saturation. Super saturation is broken by sudden chilling either by decreasing steam flow or by increasing vacuum or by suddenly mixing large amount of cold syrup. The breakeven point is detected by observing a drop of syrup on glass plate under lamp light. Appearance of shiny, small crystals on the plate indicates the breakeven point.

In India, syrup is initially seeded with external seed grains. About one ton of fine gains are mixed with the syrup in the pan. This is sufficient for 25 to 30 tons of massecuite. This saves time and disposes of low grade sugar.

Centrifugation-

It is separation of sugar crystals from mother liquor. The centrifuge is a cylindrical perforated basket rotated by mounting on vertical shaft. It holds back sugar crystals but allows only liquid to pass through the pores. Keeping hot massecuite in the centrifuge it is spun at the speed of 1800- 2400 rpm.

Centrifugal force draws the massecuite to the wall of basket and force out the syrup through the perforations. Sugar crystals appear greyish brown colored due to coating of molasses film. So, water is sprayed to wash out adhered molasses. The basket is rotated till sugar is fairly dry to collect.

Epilogue

Special thanks to M.D to grantus permission to visit lokanete Balasaheb Desai co-operative sugar factory also special thanks to A.C. Officer who gives us all information about sugar factory also thanks to principal to give us permission to visit factory. information provided in this report is valuable to all hence it is important.
